

Norco 3600lb. Car Dolly - 78090A

Brand: Norco

Product Code: NOR-78090A

Call for Price: 877-805-1154

Description

Norco Car Dolly with a 3600lb. capacity features a height adjustment from 12-3/4" to 15-3/4" and a length adjustment from 30" to 60". This dolly, made in the USA, allows for the easy movement of vehicles, with or without tires, that have been rendered inoperable due to engine/transaxle removal or other mechanical problems, useful for automobile repair, collision repair, and vehicle inspection applications. This unit frees up lifts and floor jacks for other work to be performed and can also be used in pairs for maximum maneuverability in tight places. The dolly's universal design fits any car, without the need for additional vehicle adapters, even allowing the easy movement of a front-wheel-drive vehicle when its drive train has been removed. This unit also features quick and independent width and height adjustments, with fully-adjustable outriggers to fit any vehicle frame width, and the unit's threaded lift saddles are independently-adjustable and rubber-padded to provide maximum frame protection. This dolly does not require installation to the subframe or engine/transaxle cradle mounting holes, and the unit's four 6" ball-bearing, swivel caster wheels have a rated capacity of 900lbs. each. Norco charges a limited access fee for shipments to military bases, schools, churches, and all other gated areas, as well as charging a substantial fee for re-delivery of order, lift gate use, and residential delivery.
